

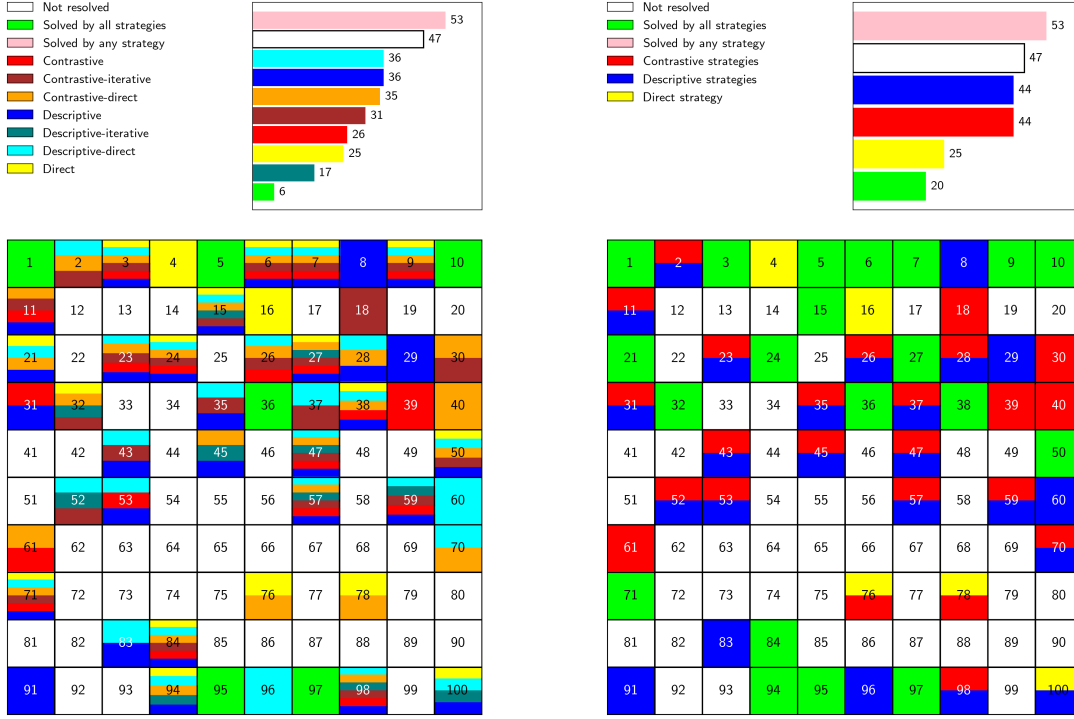

Figure 16: **Overall result of each strategy on synthetic BPs.** Colormaps depict all problems solved by any tested model using the respective prompting strategy. The right figure aggregates strategies into corresponding groups for better coverage exposure.

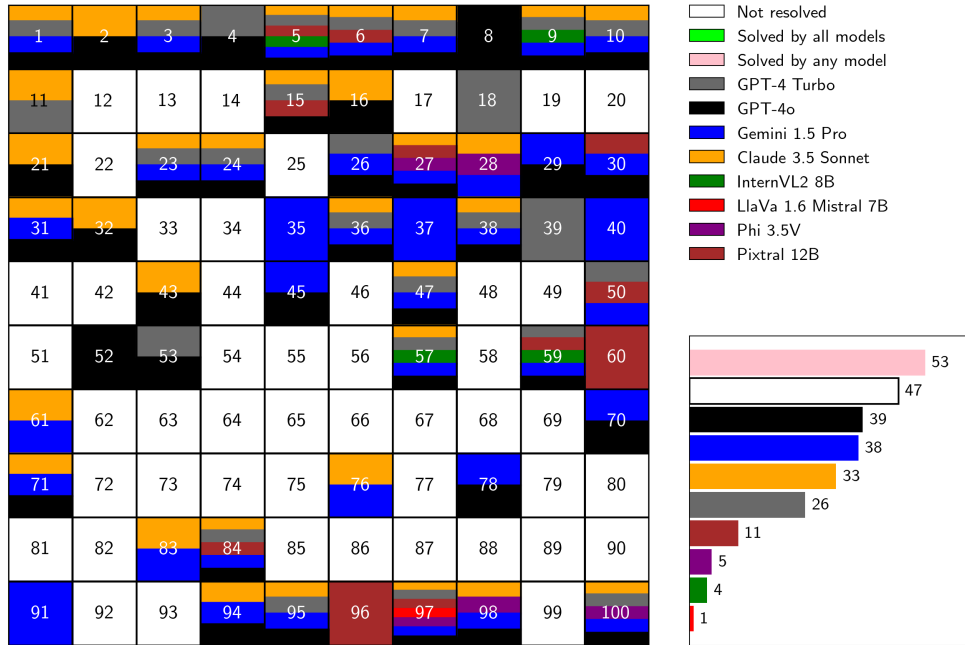

Figure 17: **Final summary of all experiments on the synthetic Bongard Problems dataset.** The colormap aggregates all problems solved by any tested model using any generation prompting strategy. Overall, the models collectively managed to solve 53 problems.

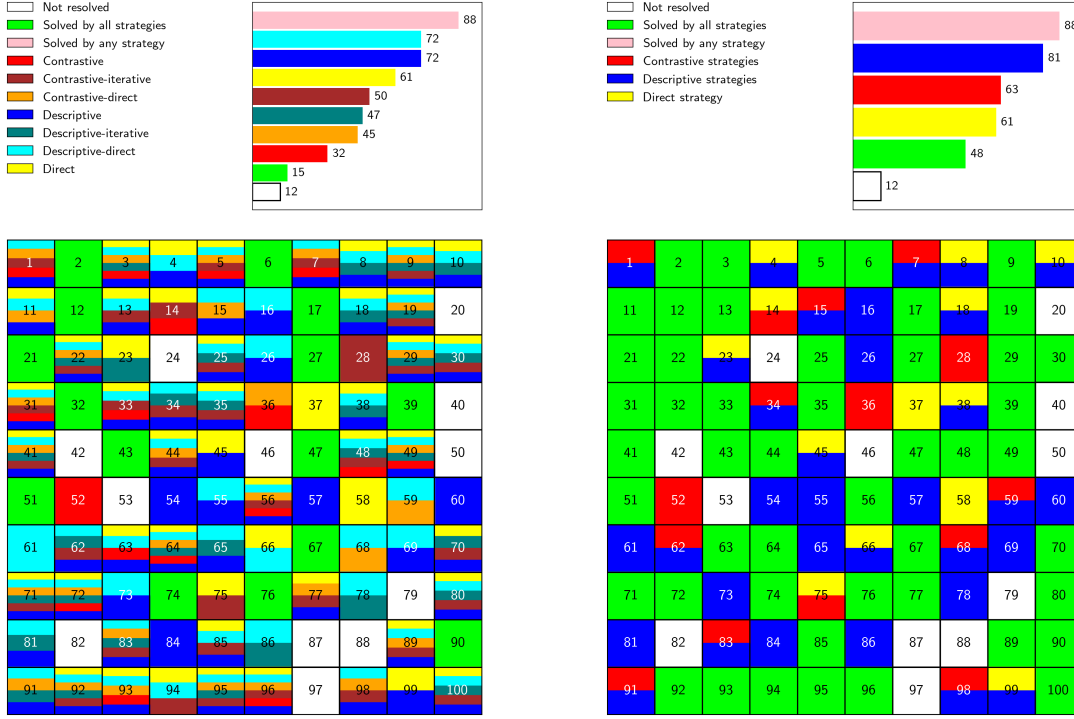

Figure 18: **Overall result of each strategy on Bongard HOI.** Colormaps depict all problems solved by any tested model using the respective prompting strategy. The right figure aggregates strategies into corresponding groups for better coverage exposure.

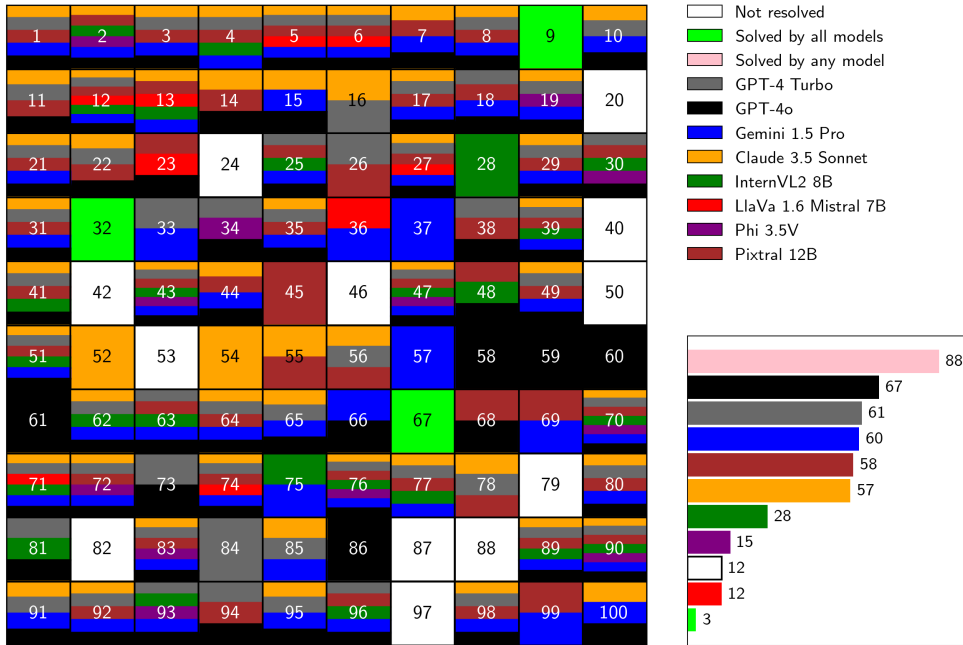

Figure 19: **Final summary of all experiments on the Bongard HOI dataset.** The colormap aggregates all problems solved by any tested model using any generation prompting strategy. Overall, the models collectively managed to solve 88 problems.

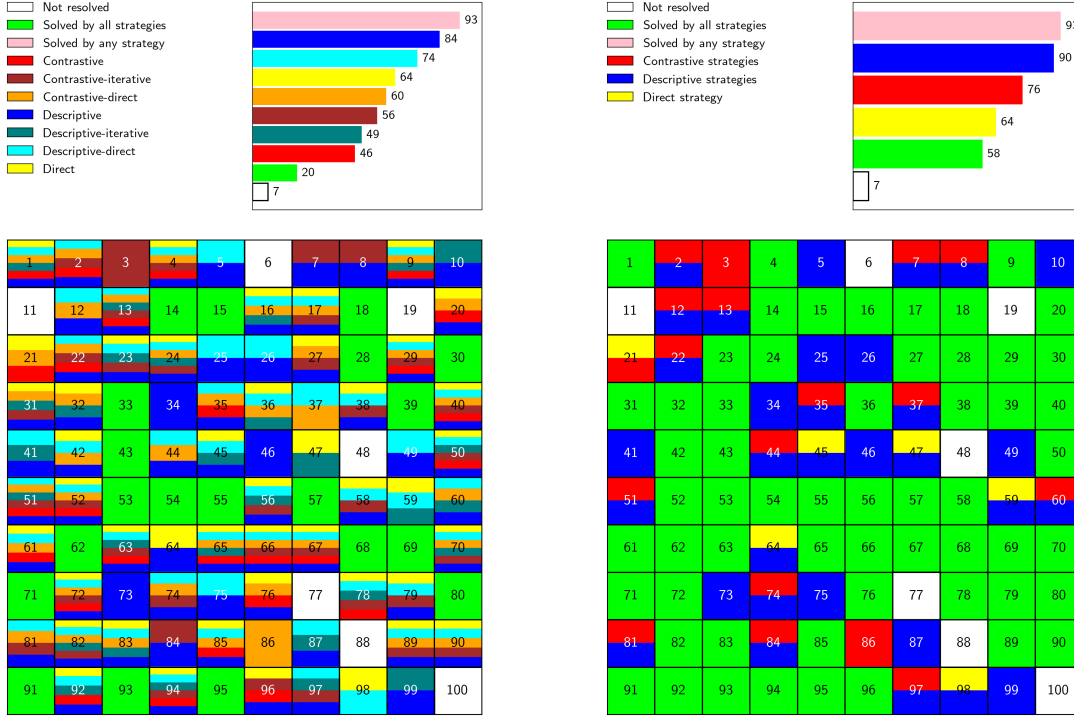

Figure 20: **Overall result of each strategy on Bongard-OpenWorld.** Colormaps depict all problems solved by any tested model using the respective prompting strategy. The right figure aggregates strategies into corresponding groups for better coverage exposure.

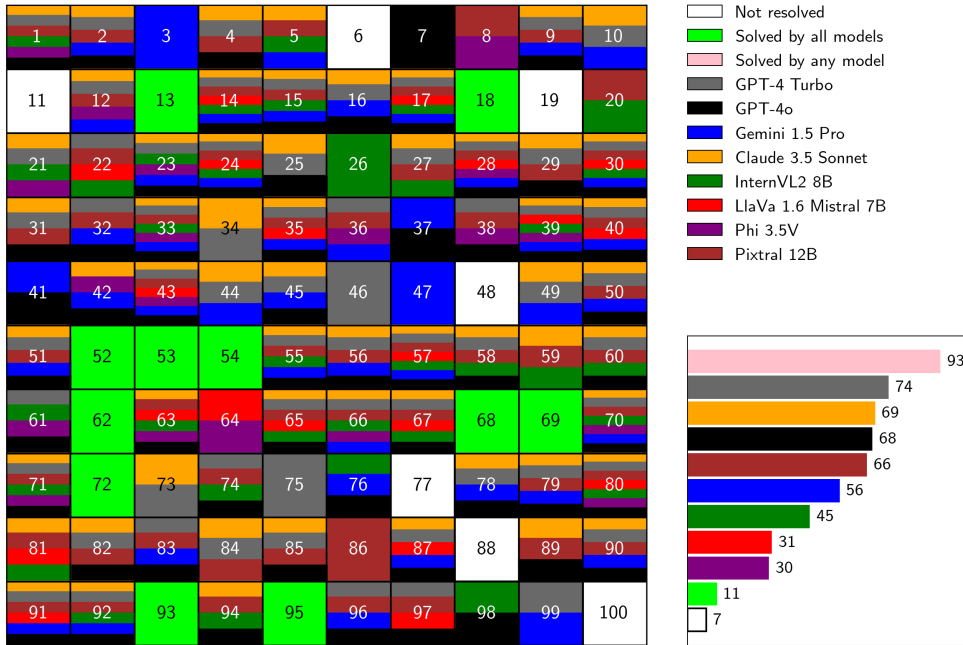

Figure 21: **Final summary of all experiments on the Bongard-OpenWorld dataset.** The colormap aggregates all problems solved by any tested model using any generation prompting strategy. Overall, the models collectively managed to solve 93 problems.
